

Do you want more body in your lips, more definition of the edges of the lips, or both? As we age, our skin changes and the volume of youthful skin begins to diminish as wrinkles and folds form. Even the lucky few who were born with perfectly beautiful lips may want to consider enhancing their lips' appearance. Over time, the lips' volume depletes, leaving a thinner, flatter appearance. Wrinkles and fine lines compromise their smooth look, and the vermilion borders and Cupid's bow become less defined. Around the mouth, the area between your upper lip and nose can become flattened, and the corners of the mouth may turn downward, creating a tired, aged appearance. However, Juvederm™ helps fight the signs of aging, by addressing the lips' texture and smoothness and filling the lines and wrinkles caused by smoking and pursing your lips over time...and of course, by adding volume for a fresh, natural, look. Augmentation of the lips should be subtle. A small increase goes a long way. Your lips should not arrive in a room before you.

Juvederm™ offers instant, natural-looking results for up to one year non-surgically. The injections can be performed in a brief office visit with Dr. Gina Park.
